## **PROBLEM STATEMENT**

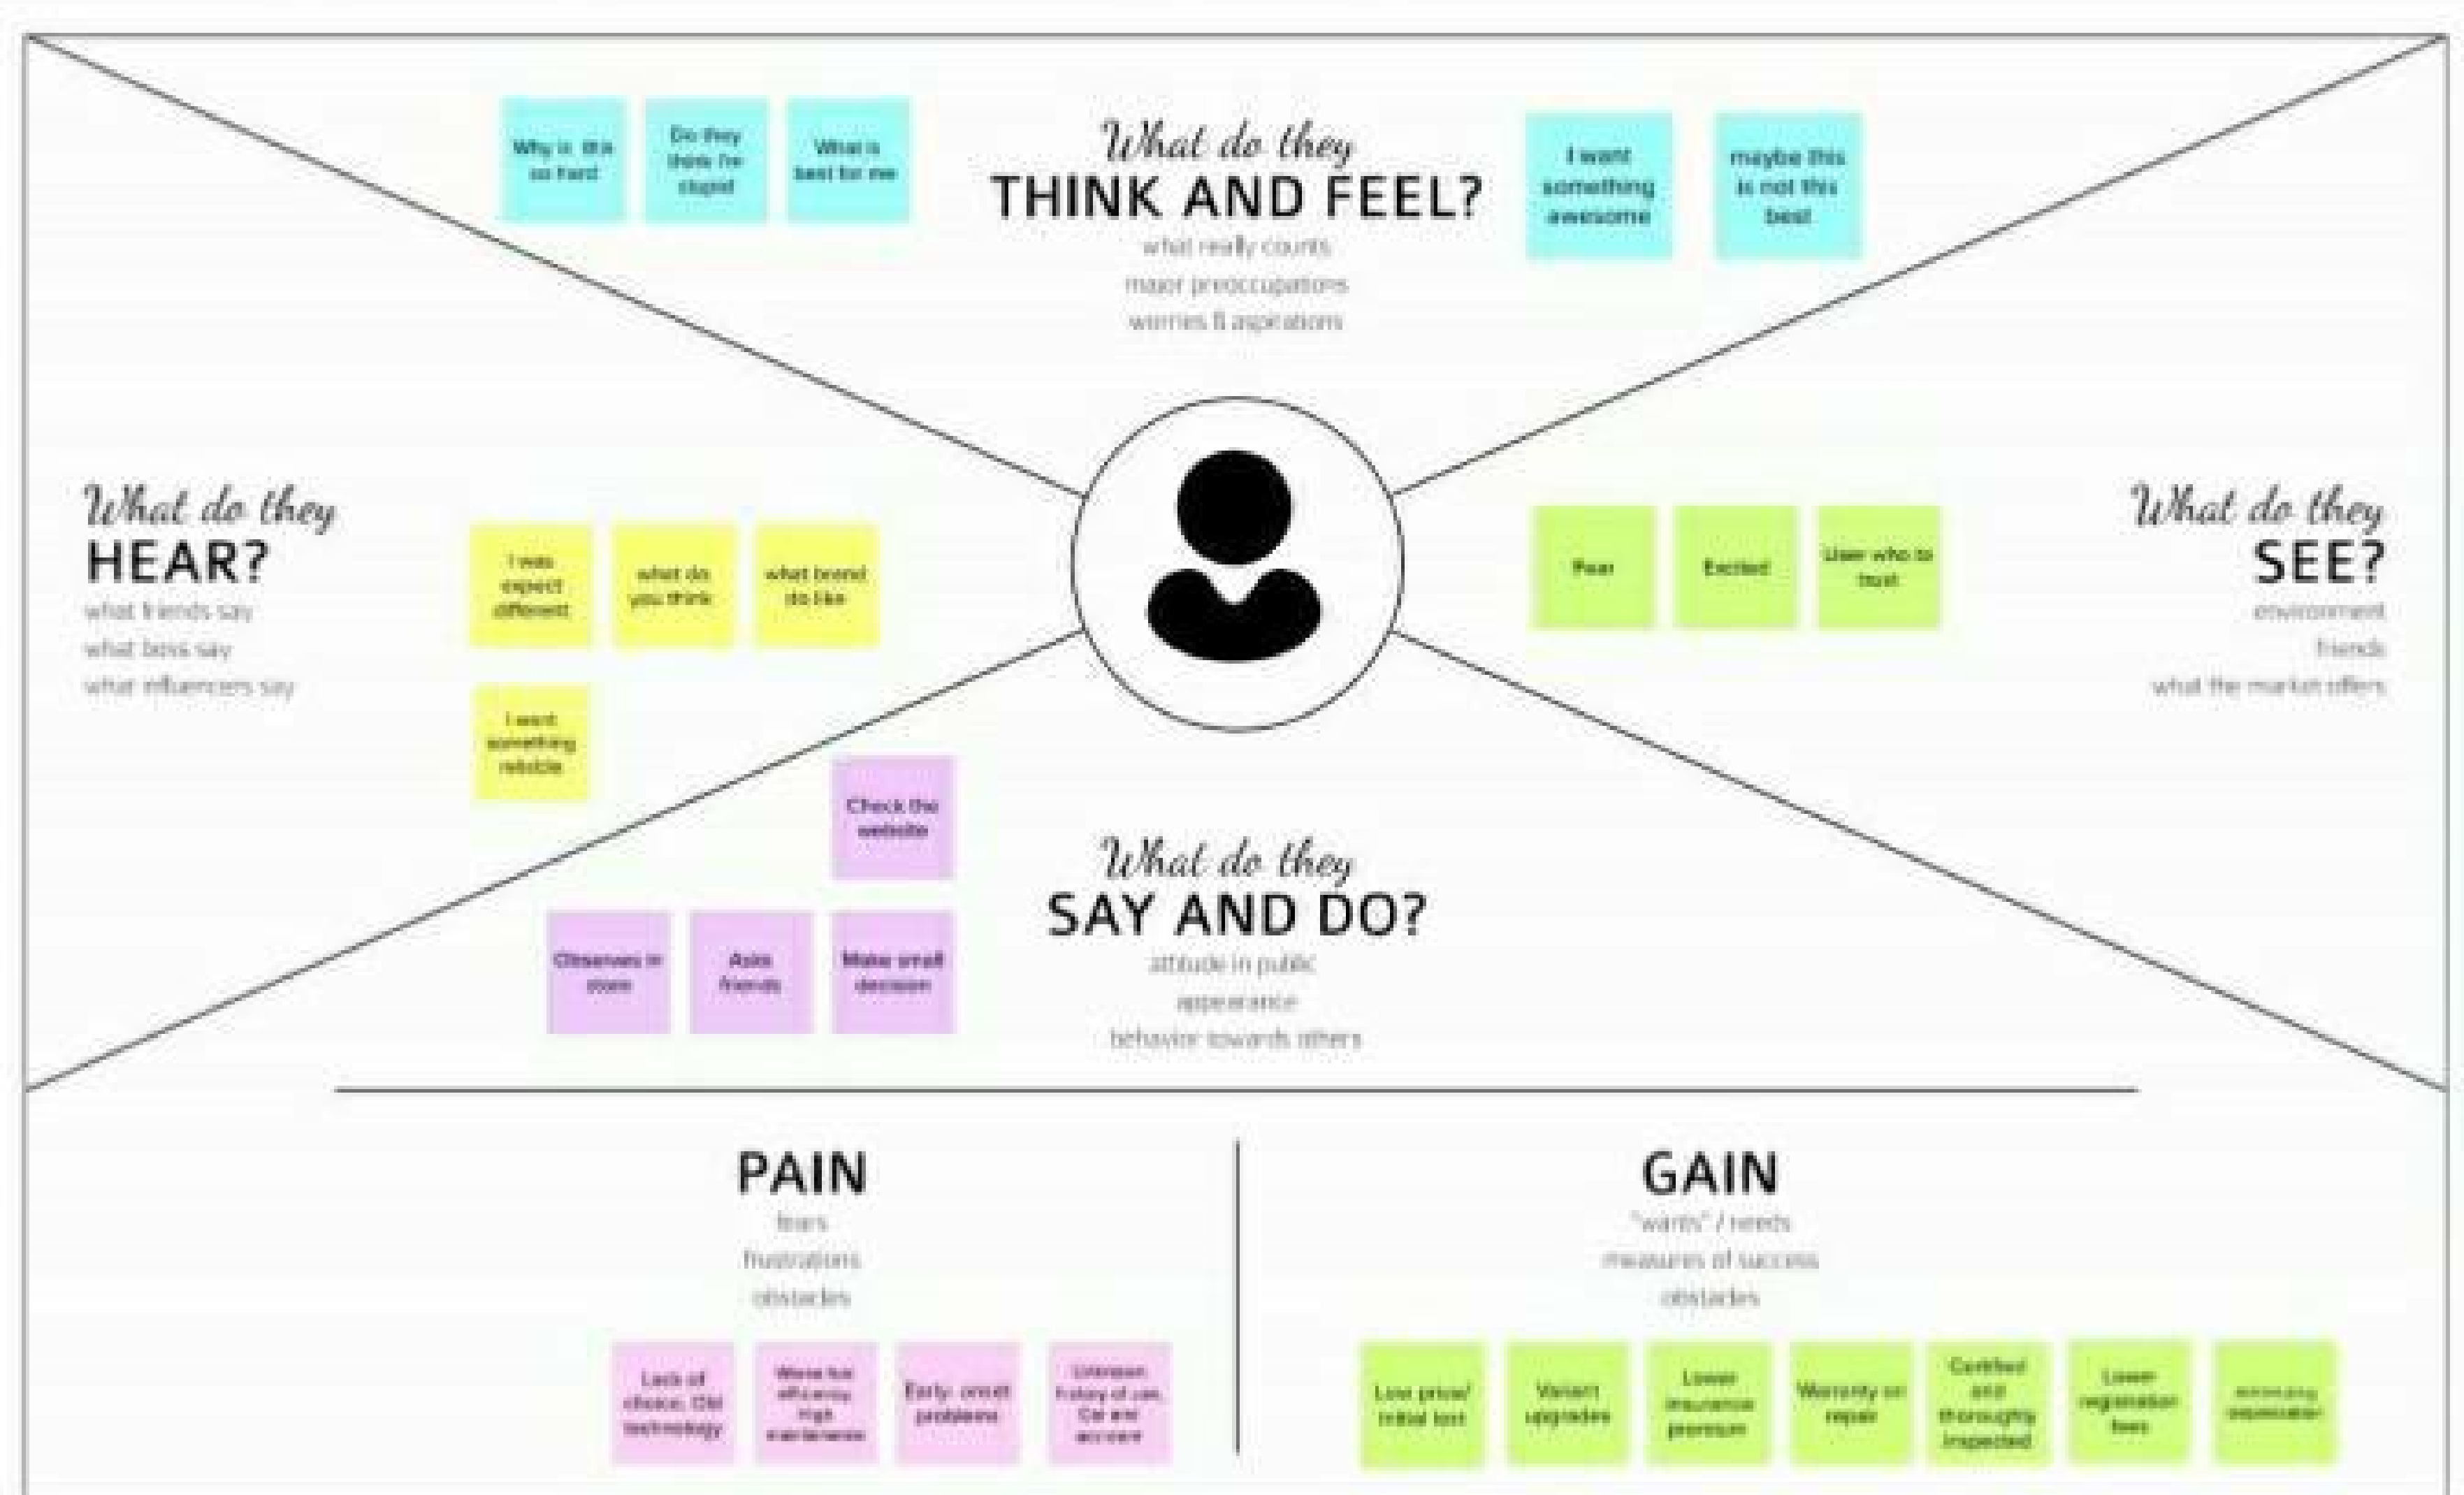

Car resale value prediction system is used to predict the car resale price as per the data set of consumer data like engine capacity, distance travelled, year of manufacture etc., This analysis can be used to study the trends in the industry, offer better insight into the market. The system also studies the service history and car usage statistics, without that we have no real idea of the condition of the car. So here, the above mentioned factors are considered during the linear regression process. Based on the results car resale price is fixed.

# Empathy Map Canvas
